DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claims 23-27 and 34-46 are objected to because of the following informalities: In instant claim 23, the phrase "at a level oat" should be amended to recite "at a level of at" for grammatical purposes. Instant claims 24-27 and 34-46 are objected to for being dependent upon claim 23. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 23-38 and 40-46 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Susuki et al, DE 2126161.

Susuki et al, DE 2126161, discloses a solid washing material of rubbery or spongy appearance, comprising 5-50% by weight of a surfactant, 5-80% by weight of a water-soluble substance, 5-80% by weight of an inorganic filler, and 5-70% by weight of water (see abstract). It is further taught by Susuki et al that the water-soluble substance includes polyvinyl alcohol, that the composition may be expanded by including a gas, and that the composition is made into an article for washing hands and body (see abstract), per the requirements of the instant invention. The examiner asserts that the polyvinyl alcohol component disclosed by Susuki et al would inherently meet the glass transition temperature and elastic modulus requirements of the instant invention, since applicant's own specification indicates that polyvinyl alcohol is a preferred polymeric material that meets these properties (see page 12 of the instant specification). Absent a full translation of Susuki et al, DE 2126161, instant claims 23-38 and 40-46 are anticipated.

In the alternative that the above disclosure is insufficient to anticipate the above listed claims, it would have nonetheless been obvious to the skilled artisan to produce the claimed composition, as the reference teaches each of the claimed ingredients within the claimed proportions.

Art Unit: 1751

6. Claims 23-27 and 32-46 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Guerry et al, U.S. Patent No. 4,176,079.

Guerry et al, U.S. Patent No. 4,176,079, discloses a water-soluble enzyme containing article comprising an enzyme dispersed in a water-soluble resin film (see abstract). It is further taught by Guerry et al that suitable water-soluble resin films include polyvinyl alcohol (see col. 2, lines 48-65), that the article also includes plasticizers (see col. 3, lines 52-58), and that the articles are made by mixing and drying the components (see col. 15, lines 25-61), per the requirements of the instant invention. Specifically, note Examples 1-30. The examiner asserts that the polyvinyl alcohol component disclosed by Guerry et al would inherently meet the glass transition temperature and elastic modulus requirements of the instant invention, since applicant's own specification indicates that polyvinyl alcohol is a preferred polymeric material that meets these properties (see page 12 of the instant specification). Therefore, instant claims 23-27 and 32-46 are anticipated by Guerry et al, U.S. Patent No. 4,176,079.

In the alternative that the above disclosure is insufficient to anticipate the above listed claims, it would have nonetheless been obvious to the skilled artisan to produce the claimed composition, as the reference teaches each of the claimed ingredients within the claimed proportions.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
